

Project Objective:

The project objective was to design a radio talk show and interview local knowledge bearers and statewide climate experts to document traditional and western knowledge about observed changes occurring in the Yukon Flats region. The goal was to identify climate related changes and to better understand the impacts the changes could have on future generations.

Results:

Interview questions were developed and people were selected to participate in interviews. Two interviews were broadcast on the local radio station and two were captured during boat trips up river. Interviewees included local elders, local residents who were familiar with the land, and Michael Brubaker from ANTHCs Center for Climate and Health. Changes to the land were documented during the interviews and climate change impacts were discussed on the radio every two weeks. The radio show provided an opportunity to share project updates. An interactive call-in radio show took place in January 2013. Two videos were produced about river bank erosion and spruce bark beetles. They are available on the LEO Alaska YouTube page and the ANTHC HVE website.

Benefits:

- Traditional knowledge documented from elders and youth will carry forward for generations.
- A greater understanding about climate change throughout the region.
- People understand the importance of documenting and discussing observed changes.
- Local residents and residents from surrounding villages are more aware of climate related threats to traditional resources and human health.
- The project helped to initiate a conversation that can carry forward into the future to begin planning appropriate adaptation strategies.

Lessons Learned:

- **People get busy in the summer.** Interviews were sometimes difficult to schedule because people use the short season for fishing and gathering for the winter.
- **Have a good microphone.** When ordering a camera that you intend to use for interviewing, make sure it has a microphone output and that you order the appropriate microphone. Without a good microphone background noise like wind could make the interview hard to hear.
- **Be realistic about your grant timelines.** Planning and interviewing can take time, especially when people are hesitant to talk on camera. Ensure that you have plenty of time to find people to interview.

Identified and contacted
people in the community
to participate in interviews.

Developed
interview questions
to ask during
interviews

Recorded interviews during boat trips
up river on two occasions. Observed
environmental changes like river bank
erosion were documented.

The tribe plans to continue documenting
traditional knowledge and observations from
local residents and from residents of surrounding
villages. Rocky also plans to continue sharing
information on the local radio station.
