PREFACE

The purpose of this report is to provide guidance in reducing facility operating costs and enhance the sustainability of this community. The report assess the current energy usage of the facility, provide options for reducing the amount of energy used, and evaluate the cost vs. benefit of each option.

Discussions of site specific concerns, financing options, general facility information, and an Energy Efficiency Action Plan are also included in this report.

ACKNOWLEDGMENTS

The Rural Energy Initiative gratefully acknowledges the assistance of Water Treatment Plant Lead Operator Alexie Ishnook, Backup Operator Jack McCarr, Tribal Administrator Robert Larsen, and Tribal Transportation Director Frances Nelson.
OVERVIEW

This report was prepared for the Koliganek Village Council. The scope of the audit focused on the Main Office Building and includes an analysis of building occupancy schedules, building shell, heating systems, heating and ventilations systems, lighting, and other electrical loads. The building houses office space for administrative staff, a post office, and large meeting space. Data was based on a site survey and interviews with the building occupants.

ENERGY BASELINE

Based on unsubsidized electricity and fuel oil prices in effect at the time of the audit, the total predicted energy costs are $10,797 per year. This includes $1,107 for electricity and $9,690 for #1 fuel oil.

Table 1 lists the predicted annual energy usage before and after the proposed retrofits.

Table 1: Predicted Annual Energy Use

</tbody>
</table>
Note 1: In reviewing the utility bills, there was a large amount of electricity being used by the facility that wasn’t accounted for in the building loads identified during the survey. It is recommended that the staff look for the source of this extra electrical use and turn it off if possible. Possible sources of unnecessary electrical use are heat trace lines, electric heaters, or coffee pot warmers left running non-stop.

Note 2: A large amount of energy could also be saved by adjusting the settings on the Toyo stove in the main lobby to turn the temperature down when the building is unoccupied.

Note 3: The woodstove has a catalytic converter inside of it to help burn more efficiently and reduce the amount of smoke coming out of the chimney. In order to work properly, it requires periodic cleaning and replacement. It is recommended that it be cleaned and/or replaced as needed.

1 Savings to Investment Ratio (SIR) is a life-cycle cost measure calculated by dividing the total savings over the life of a project (expressed in today’s dollars) by its investment costs. The SIR is an indication of the profitability of a measure; the higher the SIR, the more profitable the project. An SIR greater than 1.0 indicates a cost-effective project (i.e. more savings than cost). Remember that this profitability is based on the position of that Energy Efficiency Measure (EEM) in the overall list and assumes that the measures above it are implemented first.

2 Simple Payback (SP) is a measure of the length of time required for the savings from an EEM to payback the investment cost, not counting interest on the investment and any future changes in energy prices. It is calculated by dividing the investment cost by the expected first-year savings of the EEM.

FACILITY DESCRIPTION

Building Occupancy Schedules
The building is occupied year-round from 8:00am-5:00pm every day by approximately 2 office staff. The building is frequently accessed throughout the day as it contains post-office boxes and the city main administrative staff. There is also a conference room that is used on an intermittent basis.

Building Shell

The exterior walls are 2x6 wood-framed construction.

The roof of the building consists of rafters, assumed to be made of 12” deep wood I-beams insulated with 6” of blue-board foam.

The building is constructed on a concrete stem-wall foundation with a crawlspace.
There are approximately 17 total windows in the building, of widely varying sizes. The windows are double-pane glass, but 4 of the windows have cracked panes.

There are 2 entrances into the building. The front entrance doors did not fit well inside of the frames. It appeared that there had been a second set of arctic entry doors installed in the main entry at one time that are now removed.

**Heating Systems**

The heating systems used in the building are:

**Toyo Stove**
- Fuel Type: #1 Oil
- Input Rating: 40,000 BTU/hr
- Steady State Efficiency: 85 %
- Idle Loss: 0 %
- Heat Distribution Type: Air
- Stove Operation: 9 Months/Year

**Wood Stove**
- Fuel Type: Wood
- Stove Operation: Intermittent

**Boiler 1**
- Fuel Type: #1 Oil
- Input Rating: 148,000 BTU/hr
- Steady State Efficiency: 85 %
- Idle Loss: 1.0 %
- Heat Distribution Type: Water
- Boiler Operation: 9 Months/Year

**Space Heating Distribution Systems**

The central area of the building is heated by the Toyo Stove and Wood Stove. The rest of the building is heated by hydronic baseboards supplied by the Toyo water heater. The water heater is controlled by 2 heating zones that are controlled by individual thermostats.

**Building Ventilation Systems**

The building relies on operable windows for ventilation.

**Domestic Hot Water System**

The building is not provided with domestic hot water.

**Lighting**
The interior space is lit with T8 fluorescent trougher fixtures and incandescent light bulbs. The lights use an estimated 1,105 kWh annually.

**Other Electrical Loads**

The building is supplied with a drip style coffee machine and computers for the staff.
**Major Equipment**

</tr>
</tbody>
</table>

**PROJECT FINANCING**

The total estimated cost of the recommended EEM’s is $1,330. The payback for the implemented EEM’s is approximately 0.5 years. ANTHC is willing to assist the community with acquiring funds to complete the scope of work recommended in this energy audit.

There are several options for financing energy efficiency projects within the State of Alaska. These include the use of grants, loans, and other funding opportunities. Below is some information on potential funding opportunities.

- **Energy Efficiency Revolving Loan Program** – This is a loan administered by the Alaska Housing Finance Corporation (AHFC) for use by any applicant who is also the owner of the building where the work will take place. It provides a loan for permanent energy-efficiency projects with a completion window of one year.

- **Sustainable Energy Transmission and Supply Program** – This is a loan administered by the Alaska Energy Authority (AEA) for a government, business, or other organized body of people. It provides a loan for energy-efficiency or power transmission or distribution projects.

- **USDA-RD Communities Facilities Direct Loan & Grant Program** - This is a loan or grant provided by the US Department of Agriculture – Rural Development (USDA-RD) for any essential community facility in a rural area. It provides a loan or grant to develop essential community facilities with upgrades or equipment for improvement.

**MEASUREMENT AND VERIFICATION**

The results of these recommended measures can be measured through the collection of energy use data through the monthly bills provided by the local electric utility and the local fuel oil supplier. Collecting data and performing a historical comparison is the simplest method of validating the energy and cost savings seen by the measures. Additionally, active remote monitoring systems are available that can collect and store data regarding energy and fuel usage. These systems allow the user to track the usage in real time and can be shared more easily with partners across the state.

### Design Data

- **Building Area:** 1,512 square feet
- **Design Space Heating Load:** Design Loss at Space: 71,734 Btu/hour with Distribution Losses: 71,734 Btu/hour
  Plant Input Rating assuming 82.0% Plant Efficiency and 25% Safety Margin: 109,351 Btu/hour
  Note: Additional Capacity should be added for DHW and other plant loads, if served.
- **Typical Occupancy:** 2 people
- **Design Indoor Temperature:** 70 deg F (building average)
- **Actual City:** Koliganek
- **Weather/Fuel City:** Koliganek
- **Design Outdoor Temperature:** -21.9 deg F
- **Heating Degree Days:** 11,175 deg F-days

### Utility Information

- **Electric Utility:** Koliganek Village Council - Commercial - Lg
- **Fuel Oil Provider:** Koliganek Village Council

</tbody>
</table>

EUI: Energy Use Intensity - The annual site energy consumption divided by the structure’s conditioned area.
EUI/HDD: Energy Use Intensity per Heating Degree Day.
ECI: Energy Cost Index - The total annual cost of energy divided by the square footage of the conditioned space in the building.
Appendix C – Actual Fuel Use versus Modeled Fuel Use

The graphs below show the modeled energy usage results of the energy audit process compared to the actual energy usage report data. The model was completed using AkWarm modeling software. The orange bars show actual fuel use, and the blue bars are AkWarm’s prediction of fuel use.

Annual Energy Use

Electricity Use
Appendix D - EUI Calculation Details

The Koliganek Village Council provides electricity and fuel to the residents of Koliganek as well as to all commercial and public facilities.

The average cost for each type of fuel used in this building is shown below in Table 4. This figure includes all surcharges, subsidies, and utility customer charges:

**Table 4: Energy Cost Rates for each Fuel Type.**

<table>
<thead>
<tr>
<th>Description</th>

</tr>
</tbody>
</table>

Table 5 shows the calculated results for the building Energy Use Index (EUI), which determines the total energy usage for a type of building for comparison with other buildings of the same type. This allows the user to determine the relative energy use of a building in relation to others of the same type or use.

### Appendix E – Materials Specifications

![Product Image]

#### Performance Specifications
- **Replacement For:** T8 OR T12 4 Foot Fluorescent Tube
- **Brightness (Lumens):** 2400
- **Color Temperature:** 4000K | 5000K
- **Color Accuracy (CRI):** 80
- **Dimensions:** 1.02" X 0.72"
- **Power Consumption:** 18 Watts
- **Voltage:** 120-277 Volts
- **Dimmable:** No

#### Dimensions / Additional Data
- **Certifications:** UL, DesignLights (DLC)
- **Product/Order Code:**
  - 4000K - 18WT8P-4F-40K-BYP
  - 5000K - 18WT8P-4F-50K-BYP

#### Lifespan / Cost To Run
- **Projected Life:** @ 3 Hrs/Day 50,000 Hrs
- **Yearly Energy Cost:**
  - 3 Hrs/Day @ .11 KWH $2.17
- **Warranty:** 5 Year Thinklux Lighting Limited Warranty Earthled product protection plan is available.
ULTRA LED™ A-line Lamps

Omnidirectional

Key Features & Benefits

- Dimmable down to 10%*
- Long life: up to 15,000 hours (Lₘₐ)
- UV and IR free
- Mercury and lead free
- RoHS compliant
- Available in 2700K, 3000K, 3500K and 5000K color temperatures
- Suitable for indoor/outdoor environments
- Reduces energy consumption up to 85%
- Last up to 20 times longer than incandescent lamps
- No warm-up time, instant-on with full light output and stable color

* Performance may vary depending on dimmer used in application. Please refer to Dimmer Compatibility List (RETHO-UM) for a list of compatible dimmers or visit www.SYLVANIA.com/LEDHerofit

*Energy savings listed based on 11 cents/kWh

Rated up to 15,000 hours at 70% lumen maintenance, SYLVANIA ULTRA LED A-line omnidirectional lamps offer years of service and reduce energy and maintenance costs. SYLVANIA ULTRA LED lamps are environmentally preferred products. They are RoHS compliant and contain no mercury, lead or other hazardous materials. They emit no UV or IR radiation. A CRI of 80 ensures good color definition and 2700K, 3000K, 3500K and 5000K color temperatures, these lamps can be used in many applications in both homes and businesses.
Man-Door Gasket for Top Sill and Side Jambs

Pemko 303_PK (PG) Standard Perimeter Gasketing

- Category J gaskets for use with listed steel frames and/or classified steel covered composite, hollow metal doors rated up to and including 3 hours; wood and plastic covered composite doors rated up to and including 1-1/2 hours; and wood core doors rated for 20 minutes.
- Rigid jamb weatherstrip is shown mounted on openings with 1/16” gaps; however, each weatherstrip can seal gaps up to the depth of its seal.
- Seal depth is provided on each illustration.
- Stainless Steel fasteners are standard.
- Other fasteners are available.
- Model 303 is available with self-adhesive, two-sided tape (TST) and tek screws (3 slotted holes per part) for easy installation.
- To obtain this option, add “TST” to the end of the part number when ordering (i.e. 303APK36TST).
- This perimeter gasketing is supplied with a PemkoPrene® (“PK”) insert - item number PK47 (available in gray or black).

Manufacturers stipulate that these ratings conform to applicable NFRC procedures for determining whole product performance. NFRC ratings are determined for a fixed set of environmental conditions and a specific product size. NFRC does not rate any product and does not warrant the suitability of any product for any specific use. Consult manufacturer's literature for other product performance information.
