PREFACE

The purpose of this report is to provide guidance in reducing facility operating costs and enhance the sustainability of this community. The report assesses the current energy usage of the facility, provide options for reducing the amount of energy used, and evaluate the cost vs. benefit of each option.

Discussions of site specific concerns, financing options, general facility information, and an Energy Efficiency Action Plan are also included in this report.

ACKNOWLEDGMENTS

The Rural Energy Initiative gratefully acknowledges the assistance of Mountain Village City Manager Robert Joe and City Clerk Janelle Amos.
OVERVIEW
This report was prepared for the City of Mountain Village. The scope of the audit focused on the Mountain Village City Office and includes an analysis of building occupancy schedules, building shell, heating systems, heating and ventilations systems, domestic hot water, lighting, and other electrical loads. The Mountain Village City Office is a wood-framed building built on an elevated pile foundation and is approximately 3,564 square feet in area. The building serves as office space for the City of Mountain Village and also has a large common room used for council meetings.

ENERGY BASELINE
Based on unsubsidized electricity and fuel oil prices in effect at the time of the audit, the total predicted energy costs are $15,859 per year. This includes $6,197 for unsubsidized electricity and $9,662 for #1 fuel oil.

The State of Alaska Power Cost Equalization (PCE) program provides a subsidy to rural communities across the state to lower electricity costs and make energy affordable in rural Alaska. In Mountain Village the cost of electricity without PCE is $0.49/kWh and the cost of electricity with PCE is $0.28/kWh. With the PCE subsidy, the electric utility cost to the City of Mountain Village is $3,541 and the cost to the State of Alaska is $2,656.

Table 1 lists the predicted annual energy usage before and after the proposed retrofits for the Mountain Village City Office.

PROPOSED ENERGY EFFICIENCY MEASURES (EEM)

Table 2 below summarizes the energy efficiency measures analyzed for the Mountain Village City Office. Listed are the estimates of the annual savings, installed costs, and two different financial measures of investment return. All costs assume that local labor will be used with no additional cost associated for travel or administrative tasks.

</table>

**FACILITY DESCRIPTION**

**Building Occupancy Schedules**
The building is occupied from 9:00 AM – 5:00 PM for five days per week during standard office hours for use by the city. There is a large gathering area that is used for city council meetings and similar events periodically in the evenings.

**Building Shell**

The building is a wood-framed lumber construction that is built on an elevated pile foundation. The roof has 2x6 lumber construction with attic space available.

There are 10 total windows in the building. Each window has double-pane glass with wood framing and is approximately 46” x 46” in dimension. One of the windows has been boarded up because of broken glass and one of the windows is facing in the southern direction.

There are three total entrances to the building. All of the entrances are single insulated metal doors with no windows and an arctic entrance.

**Heating Systems**

**Fuel Oil Boiler**

Nameplate Information: Weil McLain, No other name plate information available  
Fuel Type: #1 Oil  
Input Rating: 184,000 BTU/hr  
Steady State Efficiency: 82 %  
Idle Loss: 0.75 %  
Heat Distribution Type: Glycol  
Boiler Operation: All Year  

There was no available nameplate on the boiler and the heat rating was estimated based on comparison to other boilers in various facilities in the community.

**Space Heating Distribution Systems**

Space heating is achieved through a baseboard distribution system that transports heated glycol throughout the building to disperse the heat through baseboard units. There are three heat loops; one each for the VPSO/Jail, the western offices of the facility, and the eastern offices of the facility.

**Lighting**

### PROJECT FINANCING

The total estimated cost of the recommended EEM’s $10,280. The payback for the implemented EEM’s is approximately 2.7 years. ANTHC is willing to assist the community with acquiring funds to complete the scope of work recommended in this energy audit.

There are several options for financing energy efficiency projects within the State of Alaska. These include the use of grants, loans, and other funding opportunities. Below is some information on potential funding opportunities.

**Energy Efficiency Revolving Loan Program** – This is a loan administered by the Alaska Housing Finance Corporation (AHFC) for use by any applicant who is also the owner of the building where the work will take place. It provides a loan for permanent energy-efficiency projects with a completion window of one year.

**Sustainable Energy Transmission and Supply Program** – This is a loan administered by the Alaska Energy Authority (AEA) for a government, business, or other organized body of people. It provides a loan for energy-efficiency or power transmission or distribution projects.
**USDA-RD Communities Facilities Direct Loan & Grant Program** - This is a loan or grant provided by the US Department of Agriculture – Rural Development (USDA-RD) for any essential community facility in a rural area. It provides a loan or grant to develop essential community facilities with upgrades or equipment for improvement.

**MEASUREMENT AND VERIFICATION**

The results of these recommended measures can be measured through the collection of energy use data through the monthly bills provided by the local electric utility and the local fuel oil supplier. Collecting data and performing a historical comparison is the simplest method of validating the energy and cost savings seen by the measures. Additionally, active remote monitoring systems are available that can collect and store data regarding energy and fuel usage. These systems allow the user to track the usage in real time and can be shared more easily with partners across the state.
Appendix A – Energy Billing Data

The table below shows the fuel and electricity data used during the energy modeling process to confirm the accuracy of the energy distribution. The fuel use distribution was estimated based on the times of each fuel delivery, which were not in a precisely monthly basis.

### Design Data

- **Building Area:** 3,564 square feet
- **Design Space Heating Load:** Design Loss at Space: 49,844 Btu/hour with Distribution Losses: 49,844 Btu/hour
  Plant Input Rating assuming 82.0% Plant Efficiency and 25% Safety Margin: 75,981 Btu/hour
  Note: Additional Capacity should be added for DHW and other plant loads, if served.

### Typical Occupancy

- **0 people**

### Design Indoor Temperature

- **70 deg F (building average)**

### Actual City

- **Mountain Village**

### Design Outdoor Temperature

- **-24.3 deg F**

### Weather/Fuel City

- **Mountain Village**

### Heating Degree Days

- **12,947 deg F-days**

### Utility Information

- **Electric Utility:** Alaska Village Electric Cooperative

</tr>
</tbody>
</table>

EUI: Energy Use Intensity - The annual site energy consumption divided by the structure’s conditioned area.

EUI/HDD: Energy Use Intensity per Heating Degree Day.

ECI: Energy Cost Index - The total annual cost of energy divided by the square footage of the conditioned space in the building.
Appendix C – Actual Fuel Use versus Modeled Fuel Use

The graphs below show the modeled energy usage results of the energy audit process compared to the actual energy usage report data. The model was completed using AkWarm modeling software. The orange bars show actual fuel use, and the blue bars are AkWarm’s prediction of fuel use.

Appendix D - EUI Calculation Details

The Alaska Village Electric Cooperative owns and operates the utility that provides electricity to the residents of the community as well as to all the commercial and public facilities.

The average cost for each type of fuel used in this building is shown below in Table 5. This figure includes all surcharges, subsidies, and utility customer charges:

**Table 5: Energy Cost Rates for each Fuel Type.**

<table>
<thead>
<tr>
<th>Description</th>
<th>Average Energy Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electricity</td>
<td>$0.49/kWh</td>
</tr>
<tr>
<td>#1 Oil</td>
<td>$6.33/gallons</td>
</tr>
</tbody>
</table>

Table 6 shows the calculated results for the building Energy Use Index (EUI), which determines the total energy usage for a type of building for comparison with other buildings of the same type. This allows the user to determine the relative energy use of a building in relation to others of the same type or use.

**Table 6: EUI Building Calculations for the Mountain Village City Office**

<td><strong>Total</strong></td>
<td><strong>$10,583</strong></td>
</tr>
</tbody>
</table>

This energy audit cost information assumes that all work will be completed by an employee from outside of the community. If local labor is used for the retrofits, the travel and indirect costs may be removed from the total estimated cost. The boiler cleaning and setback thermostat retrofits will likely require outside labor.
Appendix F – Materials Specifications
Programming Made Even Easier

Do you want to spend less time installing and setting up thermostats?

The new 97012 makes installation even easier with our new Setup Wizard. The Setup Wizard allows you to spend 50% less time setting up the thermostat over competitive models. Plus everything is in plain language so there are no complicated codes or button combinations to memorize.

We’ve also made programming even easier for your customers. Menus are easier to navigate. We’ve even added additional convenience features such as Automated Time adjustment for Daylight Saving Time, along with new indoor air quality reminders.

The new 97012 is so user friendly, it sets a higher standard in efficiency and simplicity for programmable thermostats. It is truly programming made even easier.

Robertshaw - Simply the Right Choice™

Features and Benefits

Set-up Wizard
Helps speed through the installation process with step-by-step setup and programming instructions.

Trilingual Display Option
Set to your customers’ language of choice – English, Spanish or French

Convenient Displays
View a full day of programming at once for quick review or easy adjustment.

Contractor ID Feature
Set it yourself or custom order with your information pre loaded. Your name and phone number remind your customers when service is needed.

Daylight Saving Time Adjustment
Automatically adjusts to correct time regardless of seasonal changes.

Adjustable Backlighting
Choose to have backlighting on at all times or only when programming. You can also adjust the brightness and contrast for improved readability.

Time of Day Zoning
When coupled with a remote sensor (part #9020i), you can control the temperature in remote locations given different scheduled events.

Three Levels of Security
Secure protection against unwanted changes to the programming menus, temperature or set-up functions with your own 4-digit PIN.

Auto Changeover
Automatically adjusts between heating and cooling cycles to maintain optimal comfort.

Worry-Free Memory Storage
Even during power outages, the thermostat maintains set point and programmed parameters.

Adjustable Temperature Offset
Change the displayed temperature from the actual sensed temperature.

Adjustable Temperature Differential
Maintains optimal customer comfort.

Intermittent Fan
Maintains optimal air filtration and circulation with minimal energy use.

Programming Made Even Easier

Do you want to spend less time installing and setting up thermostats?

The new 97012 makes installation even easier with our new Setup Wizard. The Setup Wizard allows you to spend 50% less time setting up the thermostat over competitive models. Plus everything is in plain language so there are no complicated codes or button combinations to memorize.

We’ve also made programming even easier for your customers. Menus are easier to navigate. We’ve even added additional convenience features such as Automated Time adjustment for Daylight Saving Time, along with new indoor air quality reminders.

The new 97012 is so user friendly, it sets a higher standard in efficiency and simplicity for programmable thermostats. It is truly programming made even easier.

Robertshaw - Simply the Right Choice™

Features and Benefits

Set-up Wizard
Helps speed through the installation process with step-by-step setup and programming instructions.

Trilingual Display Option
Set to your customers’ language of choice – English, Spanish or French

Convenient Displays
View a full day of programming at once for quick review or easy adjustment.

Contractor ID Feature
Set it yourself or custom order with your information pre loaded. Your name and phone number remind your customers when service is needed.

Daylight Saving Time Adjustment
Automatically adjusts to correct time regardless of seasonal changes.

Adjustable Backlighting
Choose to have backlighting on at all times or only when programming. You can also adjust the brightness and contrast for improved readability.

Time of Day Zoning
When coupled with a remote sensor (part #9020i), you can control the temperature in remote locations given different scheduled events.

Three Levels of Security
Secure protection against unwanted changes to the programming menus, temperature or set-up functions with your own 4-digit PIN.

Auto Changeover
Automatically adjusts between heating and cooling cycles to maintain optimal comfort.

Worry-Free Memory Storage
Even during power outages, the thermostat maintains set point and programmed parameters.

Adjustable Temperature Offset
Change the displayed temperature from the actual sensed temperature.

Adjustable Temperature Differential
Maintains optimal customer comfort.

Intermittent Fan
Maintains optimal air filtration and circulation with minimal energy use.

## Technical Specifications

**Electrical Rating**
- 24 Volt AC (18-30 VAC)
- 1 amp maximum load per terminal (relay outputs)
- 3 amp total maximum load (all terminals combined)

**Temperature Control Range**
- 45˚- 90˚F (7˚- 32˚C)

**Accuracy**
- +/-1.0˚F (+/-0.5˚C)

**Power Source**
- 24 VAC

**Auto Changeover Deadband**
- Selectable 2˚ to 8˚

**Temporary Temperature Override**
- 3 hour maximum or next setpoint

**Remote Sensor Capable**
- 1 indoor and 1 outdoor sensor

**System Configurations**
- Single-stage gas, oil or electric heating/cooling systems and single stage heat pump

**Terminations**
- R, W1, Y1, B, O, G, C, IS, OS

## Shipping Specifications

- **Indiv. Ctn. Dim.:** 6.625” x 4.25” x 1.625”
- **Master Ctn. Qty.:** 6
- **Master Ctn. Dim.:** 9.25” x 5.625” x 7.5”
- **Master Ctn. Wt.:** 3.5 lbs.
- **Max. Pallet Qty.:** 1260
- **Max. Pallet Wt.:** 785 lbs.

### Item 9020i and 9025i Remote Sensors
- **Indiv. Ctn. Dim.:** 2.625” x 1.5625” x 4.4375”
- **Master Ctn. Qty.:** 6
- **Master Ctn. Cu. Ft.:** 0.09
- **Max. Pallet Qty.:** 1260
- **Max. Pallet Wt.:** 785 lbs.

©2009 Invensys Controls
Description

This programmable thermostat can be used to control an electric heating system such as an electric baseboard heater, a radiant ceiling, a radiant floor, a convector, etc.

The thermostat cannot be used under the following conditions:

• The resistive load is greater than 16.7 A
• The resistive load is less than 2 A
• The system is driven by a contactor or relay (inductive load)
• The system is a central heating system

SUPPLIED PARTS:

• One (1) thermostat
• Two (2) 6-32 screws
• Two (2) solderless connectors

Installation

TURN OFF POWER TO THE HEATING SYSTEM AT THE MAIN POWER PANEL TO AVOID ELECTRICAL SHOCK.

THE INSTALLATION MUST BE PERFORMED BY AN ELECTRICIAN.

> All cables and connections must conform to the local electrical code.
> Special CO/ALR solderless connectors must be used when connecting with aluminum conductors.
> Install the thermostat onto an electrical box.
> Install the thermostat about 5 feet high, on an inside wall facing the heater.
> Avoid locations where there are air drafts (such as the top of a staircase or an air outlet), dead air spots (such as behind a door), or direct sunlight.
> Do not install the thermostat on a wall that conceals chimney or stove pipes.
> The thermostat wires are not polarized; either wire can be connected to the load or to the power supply.

NOTE: Always keep the thermostat's vents clean and unobstructed.

1. Connect the thermostat wires to the line wires and to the load wires using solderless connectors for copper wires.

2. Push any excess wire back into the electrical box.

3. Return power to heating system.
Configuration

The configuration switches are on the back of the thermostat. The factory settings are indicated by the gray cells in the following table.

<table>
<thead>
<tr>
<th>Switch</th>
<th>Intended Use</th>
<th>Factory Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>SW1</td>
<td>Early Start</td>
<td>On</td>
</tr>
<tr>
<td>SW2</td>
<td>Temperature/Time format</td>
<td>°C/24-hour/°F/12-hour</td>
</tr>
<tr>
<td>SW3</td>
<td>Cycle length</td>
<td>15 seconds, 15 minutes</td>
</tr>
<tr>
<td>SW4</td>
<td>Not used</td>
<td></td>
</tr>
</tbody>
</table>

a. Early Start can be used in Automatic mode only. When this function is enabled, the thermostat calculates the optimal time to start heating in order to obtain the desired temperature by the set time. The thermostat reassesses the start time daily based on the previous day’s performance.
b. If you change the temperature display format, the preset temperatures (▲, ▼, ✿, and ₵) will return to their default settings.
c. 15-second cycles should be selected in most cases as it provides better temperature control. 15-minute cycles must be selected if you have a fan-equipped heater or if 15-second cycles causes light flickering (especially in rural regions).

Power-up

Upon power-up, the thermostat is in manual mode (ไข่) and displays the actual (ambient) temperature.

1. Press the Hour and Min buttons to set the thermostat’s clock.
2. Press the Day button to set the day.

Temperature Setting

Setpoint

The thermostat normally displays the actual temperature. To view the setpoint, press the ▲ or ▼ button briefly. The setpoint will appear for the next 5 seconds.

To change the setpoint, press the ▲ or ▼ button until the desired temperature is displayed. To scroll faster, hold the button.

Using a preset temperature

The thermostat has 3 preset temperatures:

- Comfort temperature ✿
- Economy temperature ₵
- Vacation temperature ☀

To use the Comfort or Economy temperature, press the ✿ or ₵ button respectively. The corresponding icon will be displayed.

To use the Vacation temperature, press both ✿ and ₵ buttons simultaneously. The ☀ icon will be displayed.

Storing a preset temperature

To store the Comfort or Economy temperature:

Set the desired temperature using the ▲ or ▼ button. Press and hold the appropriate button (✿ or ₵) for approximately 3 seconds until the corresponding icon is displayed. Press the Mode button.

Operating Modes

○ Automatic - The temperature is set according to the programmed schedule. To place the thermostat in this mode, press Mode until ☀ is displayed. The icons of the current period and preset temperature are also displayed.

Temporary Bypass: If you modify the setpoint (by pressing the ▲, ▼, ✿, or ₵ button) when the thermostat is in automatic mode, the new setpoint will be used until the end of the current period. When the next period starts, the temperature set for that period becomes the new setpoint.

/disable - The programmed schedule is not used. The temperature must be set manually. To place the thermostat in this mode:

1. Press Mode until ☀ is displayed.
2. Set the temperature using the ▲, ▼, ✿, or ₵ button.

Schedule

The schedule consists of 4 periods per day which represents a typical weekday. You can program the thermostat to skip the periods that do not apply to your situation. For example, you can skip periods 2 and 3 for the weekend.

<table>
<thead>
<tr>
<th>Day</th>
<th>Period</th>
<th>Description</th>
<th>Associated temperature preset</th>
</tr>
</thead>
<tbody>
<tr>
<td>AM</td>
<td>☀</td>
<td>Wake</td>
<td>✿</td>
</tr>
<tr>
<td>AM</td>
<td>✿</td>
<td>Leave</td>
<td>₵</td>
</tr>
<tr>
<td>PM</td>
<td>✿</td>
<td>Return</td>
<td>✿</td>
</tr>
<tr>
<td>PM</td>
<td>☀</td>
<td>Sleep</td>
<td>☀</td>
</tr>
</tbody>
</table>

The Comfort ( ✿) temperature is used in periods 1 and 3 and the Economy ( ₵) temperature is used in periods 2 and 4. For example, when the period changes from 1 to 2, the setpoint automatically changes from Comfort setting ( ✿) to Economy setting ( ₵).

You can have a different program for each day of the week; i.e., each period can start at different time for each day of the week. The thermostat has been programmed with the following schedule.

<table>
<thead>
<tr>
<th>Day</th>
<th>Period</th>
<th>Setting</th>
<th>MO</th>
<th>TU</th>
<th>WE</th>
<th>TH</th>
<th>FR</th>
<th>SA</th>
<th>SU</th>
</tr>
</thead>
<tbody>

<tr>
<td>AM</td>
<td>☀</td>
<td>10:00 PM</td>
<td>PM</td>
<td>PM</td>
<td>PM</td>
<td>PM</td>
<td>PM</td>
<td>PM</td>
<td>PM</td>
</tr>
</tbody>
</table>

To modify the schedule:

1. Press Pgm to access the programming mode. Period 1 is selected.
2. Press Day to select the day to program (hold for 3 seconds to select the entire week).
3. Press Hour and Min to set the start time of the selected period, or press Clear if you want to skip the period (--) is displayed).
4. Press Pgm to select another period, or press Day to select another day. Then repeat step 3.
Press Mode to exit the programming mode.

NOTE: If no button is pressed for 60 seconds, the thermostat will automatically exit the programming mode.

Power Outage

During a power outage, the settings are stored in memory. However, only the thermostat’s clock must be re-adjusted if the power failure lasts more than 2 hours. When power comes back, the thermostat will return to the operating mode that was active prior to the power failure.

Troubleshooting

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>SOLUTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thermostat is hot.</td>
<td>This condition is normal. Under normal operation, the thermostat housing can reach a temperature between 35°C (95°F) and 40°C (104°F).</td>
</tr>
<tr>
<td>Heater is always On.</td>
<td>The thermostat has not been correctly wired.</td>
</tr>
<tr>
<td>Thermostat indicates that heating is On, but the heater is not On.</td>
<td>The thermostat has not been correctly wired.</td>
</tr>
<tr>
<td>Wrong temperature is displayed.</td>
<td>The thermostat is exposed to air draft. Eliminate the draft. The sticker on the thermostat’s screen has not been removed.</td>
</tr>
<tr>
<td>Wrong time is displayed.</td>
<td>The thermostat was without power for more than 2 hours.</td>
</tr>
<tr>
<td>Temperature does not change according to the programmed schedule.</td>
<td>Check that the thermostat is in Automatic mode. Check the schedule and clock settings.</td>
</tr>
<tr>
<td>Display disappears and reappears after a few minutes.</td>
<td>The thermal protection device on the heater is open. This can happen after a power failure or if the heater is obstructed by furniture or curtains.</td>
</tr>
<tr>
<td>Display looks faded when heating is activated.</td>
<td>The heating system is less than the required minimum load. This thermostat cannot be used below that rating.</td>
</tr>
</tbody>
</table>

Warranty

Aube warrants this product, excluding battery, to be free from defects in the workmanship or materials, under normal use and service, for a period of three (3) years from the date of purchase by the consumer. If at any time during the warranty period the product is determined to be defective or malfunctions, Aube shall repair or replace it (at Aube’s option).

If the product is defective,
(i) return it, with a bill of sale or other dated proof of purchase, to the place from which you purchased it, or
(ii) contact Aube. Aube will make the determination whether the product should be returned, or whether a replacement product can be sent to you.

This warranty does not cover removal or reinstallation costs. This warranty shall not apply if it is shown by Aube that the defect or malfunction was caused by damage which occurred while the product was in the possession of a consumer.

Aube’s sole responsibility shall be to repair or replace the product within the terms stated above. AUBE SHALL NOT BE LIABLE FOR ANY LOSS OR DAMAGE OF ANY KIND, INCLUDING ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING, DIRECTLY OR INDIRECTLY, FROM ANY BREACH OF ANY WARRANTY, EXPRESS OR IMPLIED, OR ANY OTHER FAILURE OF THIS PRODUCT. Some provinces and states do not allow the exclusion or limitation of incidental or consequential damages, so this limitation may not apply to you.

This warranty is the only express warranty AUBE MAKES ON THIS PRODUCT. THE DURATION OF ANY IMPLIED WARRANTIES, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IS HEREBY LIMITED TO THE THREE-YEAR DURATION OF THIS WARRANTY. Some provinces and states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation may not apply to you.

This warranty gives you specific legal rights, and you may have other rights which vary from province or state to another.

Door Bottom Sweep
(Replacement for Damaged Brush Sweep)
Door Bottom Sweep

(For Doors w/ Very Large Gaps and/or Damaged Bottom Edges)

DB054 Door Bottom – 1-3/4” Vinyl – 36”

Energy loss through the bottom of doors can be minimized with the installation of a door bottom in conjunction with your smooth top threshold. This combination provides a weatherproof seal between the bottom of the door and the top of the threshold. Drip caps also provide your exposed entry ways protection by diverting water away from the door bottom and thresholds. M-D Building Products offers multiple combinations of new and replacement door bottoms and drip caps that will fit most entry doors.

SKU: 68593 CATEGORIES: DOOR SEALS, WEATHERIZATION &
Door Bottom Sweep
(Lower Profile)

DB002 U-Shaped Door Bottom w/Drip Cap – 1-3/8” x 36”

Energy loss through the bottom of doors can be minimized with the installation of a door bottom in conjunction with your smooth top threshold. This combination provides a weatherproof seal between the bottom of the door and the top of the threshold. Drip caps also provide your exposed entry ways protection by diverting water away from the door bottom and thresholds. M-D Building Products offers multiple combinations of new and replacement door bottoms and drip caps that will fit most entry doors.

SKU: 80570 CATEGORIES: Door Seals, Weatherization & Thresholds
Door Top and Side Jambs

Cinch Door Seal Tops and Sides 42” Silver

Cinch™ Door Seal Top & Sides is a fast and easy way to save money by sealing your doors against drafts and leaks. Say goodbye to drills, screws, screwdrivers or pilot holes. Simply measure, trim, peel and stick your way to energy savings in any season. Specially developed with 3M™ Adhesive Technology, Cinch installs in mere minutes and lasts for years.

KEY FEATURES:
- Door Seal Top & Sides
- Easy installation with 3M™ Adhesive Technology
- Energy savings

WHERE TO BUY
High Efficiency Circulators

GRUNDFOS ALPHA2

Grundfos ALPHA2 is versatile and efficient whether you use one of its seven speed or pressure control settings or simply leave it on the factory setting AUTOADAPT™. The ALPHA2 with its ECM motor design reduces energy consumption by 50%, and in AUTOADAPT mode, will automatically analyze the heating system, find the optimum setting, continue to adjust its operation to changes in demand, and reduce power consumption by up to 85% ensuring the lowest possible energy consumption without sacrificing comfort.

The Grundfos ALPHA2 circulator and AUTOADAPT are predicated on:

• 65 years of hydronic experience of how pumps work in countless applications and operating environments
• 15 years of ECM motor experience in the market
• ALPHA2 materials and design resist blockage from magnetite and iron oxide particles found in closed hydronic systems
• ALPHA2 is made at our Grundfos manufacturing plant in Fresno, California

Key Features and Benefits

• Simple push button control enables the ALPHA2 to be programmed in one of 3-constant speed, 3-constant pressure, or AUTOADAPT control modes. The current operating mode is always visible on the ALPHA2’s LED display
• The large LED display shows the current energy consumption in Watts and estimated flow in gallons per minute
• For installation, you have the flexibility to use either our unique ALPHA Plug with line cord or the ALPHA2 with terminal box for conduit connections
• ALPHA2 is complete with an integrated check-valve, foam insulation jacket, and nut captures for flanges. ALPHA2 comes in both cast iron and stainless steel models
• Robust startup enables the ALPHA2 to continuously attempt to restart – indefinitely – in blocked rotor conditions
• ALPHA2 can be used as a replacement for more than 30 competitor pump models

APPLICATIONS

• Heating & cooling
• Hot water recirculation
