Investigative Energy Audit
For
Shageluk Clinic

Prepared For
City of Shageluk

June 30, 2017

Prepared By:
ANTHC-DEHE
4500 Diplomacy Drive,
Anchorage, AK 99508
PREFACE

The purpose of this report is to provide guidance in reducing facility operating costs and enhance the sustainability of this community. The report assesses the current energy usage of the facility, provide options for reducing the amount of energy used, and evaluate the cost vs. benefit of each option.

Discussions of site specific concerns, financing options, general facility information, and an Energy Efficiency Action Plan are also included in this report.

ACKNOWLEDGMENTS

The Rural Energy Initiative gratefully acknowledges the assistance of Shageluk Mayor Chevie Roach and Shageluk City Clerk Scott Wolfersheim.
OVERVIEW

This report was prepared for the City of Shageluk. The scope of the audit focused on the Shageluk Clinic and includes an analysis of building occupancy schedules, building shell, heating systems, heating and ventilations systems, domestic hot water, lighting, and other electrical loads. The Shageluk Clinic was constructed in 2010 and is approximately 1,690 square feet. The building provides medical care and treatment to the residents of the community and is owned by the City of Shageluk.

ENERGY BASELINE

Based on unsubsidized electricity and fuel oil prices in effect at the time of the audit, the total predicted energy costs are $11,577 per year. This includes $4,054 for unsubsidized electricity and $7,523 for #1 fuel oil.

The State of Alaska Power Cost Equalization (PCE) program provides a subsidy to rural communities across the state to lower electricity costs and make energy affordable in rural Alaska. In Shageluk, the cost of electricity without PCE is $0.45/kWh and the cost of electricity with PCE is $0.22/kWh. With the PCE subsidy, the electric utility cost to the City of Shageluk is $1,982 and the cost to the State of Alaska is $2,072.

Table 1 lists the predicted annual energy usage before and after the proposed retrofits for the Shageluk Clinic.

PROPOSED ENERGY EFFICIENCY MEASURES (EEM)

Table 2 below summarizes the energy efficiency measures analyzed for the Shageluk Clinic. Listed are the estimates of the annual savings, installed costs, and two different financial measures of investment return. All costs assume that local labor will be used with no additional cost associated for travel or administrative tasks.

FACILITY DESCRIPTION

Building Occupancy Schedules

The building is occupied from 9:00 AM – 5:00 PM for seven days per week and periodically during the evenings in the event of a patient emergency.

Building Shell

The building is a wood-framed lumber construction built on elevated piles. The roof has 2x8 lumber construction.

There are 6 total windows in the building. Each window has double-pane glass with wood framing. Five of the windows are 45” x 29” and 1 of the windows is 45” x 27”.

There are two total entrances to the building. Both of the entrances are single wood doors with a half-lite window.
**Heating Systems**

The heating systems used in the building are:

**Bock Hot Water Heater**

- Fuel Type: #1 Oil
- Input Rating: 105,000 BTU/hr
- Steady State Efficiency: 80%
- Idle Loss: 0.5%
- Heat Distribution Type: Water
- Boiler Operation: All Year

**Forced Air Heating System**

- Fuel Type: #1 Oil
- Input Rating: 150,000 BTU/hr estimated
- Steady State Efficiency: 80%
- Idle Loss: 0.5%
- Heat Distribution Type: Air

**Space Heating Distribution Systems**

Space heating is achieved through a forced-air heating system. The building set points were at 65 deg. F at the time of the site visit.

**Lighting**

**Other Electrical Loads**

There is a variety of office equipment and phones that are used during the day that use a small amount of energy throughout the year.

**PROJECT FINANCING**

The total estimated cost of the recommended EEM’s is $4,640. The payback for the implemented EEM’s is approximately 3.2 years. ANTHC is willing to assist the community with acquiring funds to complete the scope of work recommended in this energy audit.

There are several options for financing energy efficiency projects within the State of Alaska. These include the use of grants, loans, and other funding opportunities. Below is some information on potential funding opportunities.

- **Energy Efficiency Revolving Loan Program** – This is a loan administered by the Alaska Housing Finance Corporation (AHFC) for use by any applicant who is also the owner of the building where the work will take place. It provides a loan for permanent energy-efficiency projects with a completion window of one year.

- **Sustainable Energy Transmission and Supply Program** – This is a loan administered by the Alaska Energy Authority (AEA) for a government, business, or other organized body of people. It provides a loan for energy-efficiency or power transmission or distribution projects.

- **USDA-RD Communities Facilities Direct Loan & Grant Program** – This is a loan or grant provided by the US Department of Agriculture – Rural Development (USDA-RD) for any essential community facility in a rural area. It provides a loan or grant to develop essential community facilities with upgrades or equipment for improvement.

**MEASUREMENT AND VERIFICATION**

The results of these recommended measures can be measured through the collection of energy use data through the monthly bills provided by the local electric utility and the local fuel oil supplier. Collecting data and performing a historical comparison is the simplest method of validating the energy and cost savings seen by the measures. Additionally, active remote monitoring systems are available that can collect and store data regarding energy and fuel usage. These systems allow the user to track the usage in real time and can be shared more easily with partners across the state.
APPENDICES

Appendix A – Energy Billing Data

The table below shows the fuel and electricity data used during the energy modeling process to confirm the accuracy of the energy distribution. The fuel use distribution was estimated based on the times of each fuel delivery, which were not in a precisely monthly basis.

<td>$6.85</td>
</tr>
<tr>
<td>With Proposed Retrofits</td>
<td>107.4</td>
<td>8.25</td>
<td>$6.00</td>
</tr>
</tbody>
</table>

EUI: Energy Use Intensity - The annual site energy consumption divided by the structure’s conditioned area.

EUI/HDD: Energy Use Intensity per Heating Degree Day.

ECI: Energy Cost Index - The total annual cost of energy divided by the square footage of the conditioned space in the building.
Appendix C – Actual Fuel Use versus Modeled Fuel Use

The graphs below show the modeled energy usage results of the energy audit process compared to the actual energy usage report data. The model was completed using AkWarm modeling software. The orange bars show actual fuel use, and the blue bars are AkWarm’s prediction of fuel use.
Appendix D - EUI Calculation Details

The Alaska Village Electric Cooperative owns and operates the utility that provides electricity to the residents of the community as well as to all the commercial and public facilities.

The average cost for each type of fuel used in this building is shown below in Table 5. This figure includes all surcharges, subsidies, and utility customer charges:

Table 5: Energy Cost Rates for each Fuel Type.

<table>
<thead>

</tbody>
</table>

Table 6 shows the calculated results for the building Energy Use Index (EUI), which determines the total energy usage for a type of building for comparison with other buildings of the same type. This allows the user to determine the relative energy use of a building in relation to others of the same type or use.

</table>

It should be noted that the energy audit cost information in Table 2 does not consider travel or indirect costs. These would only be added if outside labor is used to perform the tasks.
Appendix F – Materials Specifications
Programming Made Even Easier
Do you want to spend less time installing and setting up thermostats?

The new 97012 makes installation even easier with our new Setup Wizard. The Setup Wizard allows you to spend 50% less time setting up the thermostat over competitive models. Plus everything is in plain language so there are no complicated codes or button combinations to memorize.

We’ve also made programming even easier for your customers. Menus are easier to navigate. We’ve even added additional convenience features such as Automated Time adjustment for Daylight Saving Time, along with new indoor air quality reminders.

The new 97012 is so user friendly, it sets a higher standard in efficiency and simplicity for programmable thermostats. It is truly programming made even easier.

Robertshaw - Simply the Right Choice™
## Technical Specifications

### Electrical Rating
- 24 Volt AC (18-30 VAC)
- 1 amp maximum load per terminal (relay outputs)
- 3 amp total maximum load (all terminals combined)

### Temperature Control Range
- 45˚- 90˚F (7˚- 32˚C)

### Accuracy
- +/-1.0°F (+/-0.5˚C)

### Power Source
- 24 VAC

### Auto Changeover Deadband
- Selectable 2˚ to 8˚F

### Temporary Temperature Override
- 3 hour maximum or next setpoint

### Remote Sensor Capable
- 1 indoor and 1 outdoor sensor

### System Configurations
- Single-stage gas, oil or electric heating/cooling systems and single stage heat pump

### Terminations
- R, W1, Y1, B, O, G, C, IS, OS

### Shipping Specifications
- **Indiv. Ctn. Dim.:** 6.625" x 4.25" x 1.625"
- **Item 9020i and 9025i Remote Sensors**
  - **Indiv. Ctn. Dim.:** 2.625" x 1.5625" x 4.4375"
  - **Master Ctn. Qty.:** 6
  - **Master Ctn. Cu. Ft.:** .09
  - **Max. Pallet Qty.:** 1260
  - **Max. Pallet Wt.:** 785 lbs.

### Patent Information

This product is covered by one or more of the following U.S. patents. Foreign patent rights may be pending. 4967382, 5803357, 6502758, 7000849, D301207, D462940
This programmable thermostat can be used to control an electric heating system such as an electric baseboard heater, a radiant ceiling, a radiant floor, a convector, etc.

The thermostat cannot be used under the following conditions:

- The resistive load is greater than 16.7 A
- The resistive load is less than 2 A
- The system is driven by a contactor or relay (inductive load)
- The system is a central heating system

SUPPLIED PARTS:

- One (1) thermostat
- Two (2) 6-32 screws
- Two (2) solderless connectors

Installation

TURN OFF POWER TO THE HEATING SYSTEM AT THE MAIN POWER PANEL TO AVOID ELECTRICAL SHOCK.

THE INSTALLATION MUST BE PERFORMED BY AN ELECTRICIAN.

- All cables and connections must conform to the local electrical code.
- Special CO/ALR solderless connectors must be used when connecting with aluminum conductors.
- Install the thermostat onto an electrical box.
- Install the thermostat about 5 feet high, on an inside wall facing the heater.
- Avoid locations where there are air drafts (such as the top of a staircase or an air outlet), dead air spots (such as behind a door), or direct sunlight.
- Do not install the thermostat on a wall that conceals chimney or stove pipes.
- The thermostat wires are not polarized; either wire can be connected to the load or to the power supply.

NOTE: Always keep the thermostat’s vents clean and unobstructed.

1. Connect the thermostat wires to the line wires and to the load wires using solderless connectors for copper wires.

2. Push any excess wire back into the electrical box.

3. Return power to heating system.
**3. Configuration**

The configuration switches are on the back of the thermostat. The factory settings are indicated by the gray cells in the following table.

<table>
<thead>
<tr>

</tbody>
</table>

**a.** Early Start can be used in Automatic mode only. When this function is enabled, the thermostat calculates the optimal time to start heating in order to obtain the desired temperature by the set time. The thermostat reassesses the start time daily based on the previous day’s performance.

**b.** If you change the temperature display format, the preset temperatures (⩫, ⩬, and ⩬) will return to their default settings.

**c.** 15-second cycles should be selected in most cases as it provides better temperature control. 15-minute cycles must be selected if you have a fan-equipped heater or if 15-second cycles causes light flickering (especially in rural regions).

**4. Power-up**

Upon power-up, the thermostat is in manual mode (�다) and displays the actual (ambient) temperature.

1. Press the Hour and Min buttons to set the thermostat’s clock.
2. Press the Day button to set the day.

**5. Temperature Setting**

**Setpoint**

The thermostat normally displays the actual temperature. To view the setpoint, press the ⩫ or ⩬ button briefly. The setpoint will appear for the next 5 seconds.

To change the setpoint, press the ⩫ or ⩬ button until the desired temperature is displayed. To scroll faster, hold the button.

**Using a preset temperature**

The thermostat has 3 preset temperatures:

- Comfort temperature ⩫
- Economy temperature ⩬
- Vacation temperature ⩬

**Storing a preset temperature**

To store the Comfort or Economy temperature:

Set the desired temperature using the ⩫ or ⩬ button. Press and hold the appropriate button (⩫ or ⩪) for approximately 3 seconds until the corresponding icon is displayed. Press the Mode button.

To store the Vacation temperature:

Set the desired temperature using the ⩫ or ⩪ button. Press and hold both ⩫ and ⩪ buttons simultaneously for approximately 3 seconds until the ⩪ icon is displayed. Press the Mode button.

**6. Operating Modes**

- **Automatic** - The temperature is set according to the programmed schedule. To place the thermostat in this mode, press Mode until 다 is displayed. The icons of the current period and preset temperature are also displayed.
  - **Temporary Bypass:** If you modify the setpoint (by pressing the ⩫, ⩫, ⩪, or ⩪ button) when the thermostat is in automatic mode, the new setpoint will be used until the end of the current period. When the next period starts, the temperature set for that period becomes the new setpoint.
  - **Manual** - The programmed schedule is not used. The temperature must be set manually. To place the thermostat in this mode:
    1. Press Mode until 다 is displayed.
    2. Set the temperature using the ⩫, ⩫, ⩪, or ⩪ button.

**7. Schedule**

The schedule consists of 4 periods per day which represents a typical weekday. You can program the thermostat to skip the periods that do not apply to your situation. For example, you can skip periods 2 and 3 for the weekend.

To modify the schedule:

1. Press Pgm to access the programming mode. Period 1 is selected.
2. Press Day to select the day to program (hold for 3 seconds to select the entire week).
3. Press Hour and Min to set the start time of the selected period, or press Clear if you want to skip the period (--:-- is displayed).
4. Press Pgm to select another period, or press Day to select another day. Then repeat step 3.
Press **Mode** to exit the programming mode.

**NOTE:** If no button is pressed for 60 seconds, the thermostat will automatically exit the programming mode.

### Power Outage

During a power outage, the settings are stored in memory. However, only the thermostat’s clock must be re-adjusted if the power failure lasts more than 2 hours. When power comes back, the thermostat will return to the operating mode that was active prior to the power failure.

### Troubleshooting

### Warranty

Aube warrants this product, excluding battery, to be free from defects in the workmanship or materials, under normal use and service, for a period of three (3) years from the date of purchase by the consumer. If at any time during the warranty period the product is determined to be defective or malfunctions, Aube shall repair or replace it (at Aube’s option).

If the product is defective,

(i) return it, with a bill of sale or other dated proof of purchase, to the place from which you purchased it, or

(ii) contact Aube. Aube will make the determination whether the product should be returned, or whether a replacement product can be sent to you.

This warranty does not cover removal or reinstallation costs. This warranty shall not apply if it is shown by Aube that the defect or malfunction was caused by damage which occurred while the product was in the possession of a consumer.

Aube’s sole responsibility shall be to repair or replace the product within the terms stated above. AUBE SHALL NOT BE LIABLE FOR ANY LOSS OR DAMAGE OF ANY KIND, INCLUDING ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING, DIRECTLY OR INDIRECTLY, FROM ANY BREACH OF ANY WARRANTY, EXPRESS OR IMPLIED, OR ANY OTHER FAILURE OF THIS PRODUCT. Some provinces and states do not allow the exclusion or limitation of incidental or consequential damages, so this limitation may not apply to you.

THIS WARRANTY IS THE ONLY EXPRESS WARRANTY AUBE MAKES ON THIS PRODUCT. THE DURATION OF ANY IMPLIED WARRANTIES, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IS HEREBY LIMITED TO THE THREE-YEAR DURATION OF THIS WARRANTY. Some provinces and states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation may not apply to you.

This warranty gives you specific legal rights, and you may have other rights which vary from province or state to another.

**Adhesive Options**

*“HT” GENERAL PURPOSE PRESSURE SENSITIVE ADHESIVE*

This acrylic based adhesive is best used to hold the rubber seal in place while installed in a static application or compressed between two stationary objects. May be used in some light duty dynamic applications against a variety of substrates. Good heat performance -20°F to +158°F. Please Note: During application ambient temperature must be above 60°F.

*“BT” 3M HIGH STRENGTH TAPE SYSTEM*

The ultimate bond between the rubber and substrate. Creates a moisture barrier and air tight seal between rubber and substrate. Highest peel and shear resistance, can be used under high loads of stress and force. Has low initial tack for easy re-positioning during installation and requires 72 hours of cure time for full bond strength. Good heat performance -20°F to +158°F.

See our How to Install video at: [www.rubber-seal-install.info](http://www.rubber-seal-install.info)

See page 42 for tape options.
Door Bottom Sweep
(Replacement for Damaged Brush Sweep)
Door Bottom Sweep

(For Doors w/ Very Large Gaps and/or Damaged Bottom Edges)

DB054 Door Bottom – 1-3/4” Vinyl – 36”

Energy loss through the bottom of doors can be minimized with the installation of a door bottom in conjunction with your smooth top threshold. This combination provides a weatherproof seal between the bottom of the door and the top of the threshold. Drip caps also provide your exposed entry ways protection by diverting water away from the door bottom and thresholds. M-D Building Products offers multiple combinations of new and replacement door bottoms and drip caps that will fit most entry doors.

Cinch Door Seal Tops and Sides 42” Silver

Cinch™ Door Seal Top & Sides is a fast and easy way to save money by sealing your doors against drafts and leaks. Say goodbye to drafts, screwing, screwdrivers or pilot holes. Simply measure, trim, peel and stick your way to energy savings in any season. Specially developed with 3M™ Adhesive Technology, Cinch installs in mere minutes and lasts for years.

WHERE TO BUY
**Bottom of Garage Doors**

---

**ProSeal™**

**U-shaped Garage Door Bottom Seal**

**Installation Instructions**

1. Remove existing garage door bottom seal. Some garage door manufacturers will pinch the aluminum track to hold the bottom seal in place. To open a pinched track, insert a flathead screwdriver into the end of the track, and gently pry open the end, just enough to allow removal of the old door seal. Both ends of the track may need to be opened.

2. Make sure any debris in the track has been removed and that it is clean and dry. Straighten out any cramps in the track.

   **Quick Tip:** Mix a bucket of water with some liquid dish soap or liquid laundry detergent. Place the seal in the soapy water and pull it out as you install it into the track.

3. Starting at either end of the garage door, insert the ¼” T-ends, attached to the ProSeal™ Garage Door Bottom Seal, into the track. Next, slide the ProSeal™ into the track, until it reaches the opposite side. Continue to pull the seal until you have approximately 2” protruding beyond the end of the track.

4. Leave 2” protruding on both sides, then use scissors to trim off the excess ProSeal™. If your door seal track was pinched and you wish to pinch it back together, use pliers to gently pinch the track back into place. Now tuck the 2” of excess seal back into the U-shaped opening. This will lock the seal in place.

Product features

- All brush seals greatly reduce the infiltration of light, air, wind, rain, and snow; prevent heat loss; control the penetration of smoke and fumes.
- The dense nylon filaments conform to the contours of every sealing surface, providing a superior seal with extremely low closing force.
- Brush remains flexible down to -40°F and has a melting point above 400°F.
- UV stabilized, dependable, long-lasting, cost-effective.
- All clear anodized brush products are supplied with gray brush

Product description

Brush Perimeter seals are designed to seal the gap between the door and the door jamb. They are surface mounted to the frame and are usually supplied with an angled flange. The angled flange provides the best contact between the brush and the surface of the door.
