

MOLD & MOISTURE

Leave space behind furniture or other items on exterior walls to allow air flow behind. This can lessen the chance of mold growth.

Always use your source of ventilation when bathing, cooking or cleaning

There is no need to test mold, all mold should be cleaned and the area dried. If there is no ventilation or air flow, try using a fan.

In Alaska, keep your humidity between 30% - 50%, this will help decrease the amount of mold, bacteria and viruses in your home!

Moisture and leaks not only give mold a place to grow, but can damage your home too.

Many homes suffer from mold problems in Alaska. Did you know that mold is a result of a moisture problem? **By fixing high moisture levels and leaks, mold will be less likely to develop.**
